

How to Punctuate Display Equations

if the equation

ends the sentence

The general classification model seeks to minimize

$$\sum_{i=1}^m e(\psi_i).$$

Adapted from [1].

if the equation follows

a complete sentence

The problem is then to determine if the following system (denoted (VC) for vertex color) has a feasible solution:

$$x_{ik} + x_{jk} \leq 1 \quad \forall (i, j) \in E, \quad k = 1, \dots, K$$

$$\sum_k x_{ik} = 1 \quad \forall i \in V$$

$$x_{ik} \in \{0, 1\} \quad \forall i \in V, \quad k = 1, \dots, K.$$

if the equation ends

an introductory clause

By defining

$$\psi_i = y_i(a_1x_{i1} + a_2x_{i2} + \dots + a_nx_{in} + \alpha)$$

and observing the fact that a correct classification takes on the property

$$\psi_i > 0,$$

we can...

if nonrestrictive* info follows

It is updated recursively following the update rule

$$p(t_k, r_k) = \frac{1}{C} L_k(s_k) \bar{p}(t_{k-1}, s_{k-1}),$$

where \bar{p} is the prior probability density...

if before a FANBOYS**

that connects two

independent clauses

We can define an error function by

$$e(\psi_i) = \begin{cases} 1 & \text{if } \psi_i \leq 0 \text{ and} \\ 0 & \text{otherwise,} \end{cases}$$

so the general classification model seeks to minimize

$$\sum_{i=1}^m e(\psi_i).$$
